

Divosan Protect

Efficiency is in our Nature -

Non rinse biocide for the Food and Beverage Industry

Challenge

How can you optimise your cleaning process and free up vital production time without risking food safety?

Your hygiene regime is designed to meet and exceed the standards necessary to ensure food safety for consumers.

However, the requirements of retailers, consumers, and regulatory bodies are changing, driving demands to achieve higher standards - but with less aggressive chemistry, lower use of resources, and in less time.

This often leads to a trade-off between standards, time, chemical and water consumption. This ultimately risks hygiene standards in the pursuit of resource savings and production time, which can quite easily lead to a lower quality product, consumer dissatisfaction, and ultimately product recall.

Solution

The solution to balance any trade-offs lies in embracing new innovation.

Cleaning procedures have incorporated rinse steps since their inception. Pre-rinse, between steps, and a final residue removal rinse before production commences.

What if a final rinse isn't necessary? What if instead, you use naturally occurring ingredients to remove the requirement for rinsing?

Divosan Protect gives you these choices. Its formulation offers a better way, taking inspiration from nature to improve standards and help you meet your production demands.

Its innovative technology results in a more streamlined process, saving time and reducing resource consumption.process, saving time and reducing your water usage.

Value

Food Safety

With Divosan Protect you can:

 Harness the power of nature to deliver reliable results, without the associated residues that often come with powerful biocides.

Sustainable use of Resources

 Reduce water consumption and benefit from reduced volume and chemical reaching your wastewater treatment plant.

Operational Efficiency

 Redistribute time, labour and resources to your product whilst still ensuring the highest hygiene standards.

Process

Making the change to Divosan Protect is a straight forward process that requires minimal training for your team. Divosan Protect can be applied using your existing foaming systems, and through our range of industry leading foaming equipment.

The technological benefits, and the peace of mind in knowing you have the best current process for your specific circumstances are easily achieved.

Why Use Divosan Protect?

- Harnesses power of nature for reliable results and reduced environmental impact
- Suitable for cleaning and disinfection of all surfaces
- EU wide BPR approval
- Can be used with standard pressure, wallmounted foaming systems
- Very effective against wide range of microorganisms: bacteria, virus, and yeasts

Divosan Protect Impact

Being in partnership with Diversey's extensive experience, application support - and our determination to deliver the optimum hygiene results and reduce your sustainable footprint - ensures that you and your process are in the safest hands.

The result is that you meet your production requirements, stay competitive, and reduce your consumption of resources and time – all without risking your food safety standards.
