

Method Card

F190 Carpet Care: Vacuuming

Key inspection points:

- Carpet is clean and free of litter

Safety

The products referenced in this method card may represent a hazard. Please consult the appropriate Material Safety Data Sheet for details.

How to vacuum a carpet using a tank vacuum

Check that the vacuum cleaner is in proper working order before use and that all required accessories are available.

Remove chewing gum, stickers and any large pieces of litter from the floor which may obstruct or damage the vacuum cleaner. Remove any unsecured furniture.

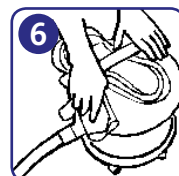

Small areas:
Vacuum the floor, starting from the furthest point from the door, backwards to the door to avoid foot prints. Pay attention to the skirting boards, edges and corners. Work systematically using overlapping passes. Give special attention to heavy traffic areas.

Large areas:
Work away from the electricity plug.

If necessary:
Replace the dust bag.

Clean the vacuum cleaner with a moist cloth and wind the cable loosely.
