

PRO SERIES YANKEE COATING ADDITIVES FOR AWAY FROM HOME TISSUE AND TOWEL

**Cost-effective Yankee coating solution for
improved operational stability and asset protection**

- Achieve a **high-quality** and **stable** coating with predictable and uniform creping performance
- **Protect** the Yankee cylinder and **extend** the life of the creping blade
- Improve **operational stability** and enjoy **superior control** over sheet attributes and final properties

The right combination of performance and value for Away from Home tissue making

Solenis has launched the PRO Series of Yankee Coating Additives to meet the essential needs of tissue mills making products for the Away from Home (AFH) market. With the PRO Series Yankee Coating Additives, even the most cost-conscious tissue maker can develop a Yankee coating with predictable and uniform creping performance. This improves the operational stability of the Yankee system and allows the tissue maker to better control sheet attributes and influence key final properties, such as bulk, tensile, and stretch. In addition, a PRO Series Yankee coating enhances the ability of the tissue maker to protect his most valuable asset — the tissue machine.

Technology Overview

Solenis' new Pro Series of Yankee Coating Additives leverages complementary adhesive and release technologies to deliver the optimal coating for AFH tissue making. The PRO Series program includes two technologies that work hand-in-hand in the Yankee system:

PRODUCT	FEATURES	YANKEE COATING BENEFITS
Crepetrol™ PRO Creping Adhesives	<ul style="list-style-type: none"> • Opens the machine operating window by controlling adhesion between the tissue and the Yankee cylinder • Controls both contact adhesion (initial adhesion to the Yankee cylinder press roll) and pell adhesion (adhesion at the creping blade) and provides a soft, pliable, workable film 	<ul style="list-style-type: none"> • Optimized coating with stable and uniform creping • Improved sheet control, with the ability to optimize key final properties, such as bulk, tensile and stretch
Rezsol™ PRO Release Agents	<ul style="list-style-type: none"> • Aids in the release of the tissue web at the creping blade • Lubricates and protects the blade from excessive wear • Intentionally interferes with the formation of the coating, resulting in the optimal release of the sheet 	<ul style="list-style-type: none"> • Enhanced asset protection and extended blade life

Service and Support

By bringing together the best of both worlds — innovative chemistries and innovative people — Solenis is setting the standard in cost-efficient tissue manufacturing. Our highly skilled team of field sales representatives, field and application engineers, and research scientists will collaborate with personnel at AFH mills to ensure that the PRO Series Yankee coating solutions provide optimal performance. We have extensive knowledge of industry best practices and can design customized programs that minimize risk and maximize outcomes.
