

Standard Features

- Pre-assembled ready-to-install package
- Pressure tested for leaks prior to shipment
- Pre-mounted on high density board
- Plumbing and electrical connections included
- Complete pre-assembled system shipped from one location
- One tracking number and lead time

Advantages

- Manufactured in Chem-Aqua's equipment facility
- Standard or custom designs available
- Easy installation and reduced installation time
- Reduced costs, problems, and professional setup
- Professional and quality service
- Fully stocked parts warehouse
- In-house technical support

Without properly engineered chemical feed equipment, it is hard to effectively manage treatment chemicals and system parameters. Chem-Aqua® Board Mounted Chemical Feed and Control Systems provide all of the components needed to treat a water system in a pre-assembled ready-to-install package. With our pre-assembled systems, the components come mounted on polypropylene boards ready for inlet and outlet connection upon arrival. This makes it faster and easier to properly install the water treatment system.

Unlike having to wait for each component to arrive from the manufacturer and then having to pay for a professional installation, all of Chem-Aqua's chemical feed and control systems are pre-assembled with pumps, controllers, and flow manifolds on a single polypropylene board that is ready to be installed upon arrival.
